

Risk Disclaimer

Trading assets such as cryptocurrencies with or without margin is high risk, can result in substantial risk of some or all of Clients' investment and may not be suitable for all investors.

Disclosure of risk

Trading and the execution of transactions similar to those described and/or resulting from this disclaimer, with or without the use of financial leverage or margin, is speculative trading of high risk. Every Client must carefully and seriously consider if this type of financial activity suits her/his needs, financial resources and personal circumstances.

As the risk of losing some, or all, of the invested funds in a relatively short period of time is high, it is recommended that Client use only funds which have earmarked for speculative, high risk financial transactions.

Currency risk

The fluctuation of the rates in the cryptocurrency markets and currency markets are often sharp without the ability to forecast the size or direction of the change or the time frame in which it occurs.

Event risk

Prices can fluctuate rapidly as a result of unforeseen circumstances, events, or changes in condition.

Operational risk

While GoGetCrypto will make every reasonable effort to ensure continuity of services, operational risk such as disruptions to communications, computers, networks or external events may lead to delays in the execution and settlement of a transaction. The use of electronic trading software results in exposure to risks involving computer software's, internet, communication systems and interfaces connected to GoGetCrypto. Risk includes, but is not limited to, hardware, software, lines and systems crashes and/or incorrect data feeding from external data providers. No trading system is free of occasional failures, and there is no system that can guarantee 100% profit or is not exposed to loss.

Margin risk

Leverage or margin in the trading of cryptocurrency is created based on collateral of a low sum relative to the total transaction. The results of trading with leverage or with margin are that a small change in market prices, within a short period of time, may cause substantial gain or loss, proportional to the size of the collateral, up to the total loss of the collateral sum in a very short period of time.

Above warnings do not cover all the possible risks connected with this type of transactions described and/or result from this disclaimer.
